

Tearfil Textile Yarns : Anam PALF

Tearfil is a visionary spinning mill, rooted in Portugal since 1973. Recognising their key role in the textile sector, they are committed to building a more connected, honest and responsible industry. Blending their solid know-how, with best fibre ingredients, such as Anam PALF®, and their customers' progressive ideas, Tearfil's mission is to create the smartest, cleanest, most sustainable yarn solutions yet.

Anam PALF® by Ananas Anam is a premium fibre made from pineapple leaves, bringing social and environmental benefits through its traceable production.

Anam PALF is created using Ananas Anam's innovative technology that processes the fibre with no bleaching and no pulping. This process keeps the fibre in its most natural form and processed to a staple fibre grade, helping to mitigate the environmental impact of microfibre pollution. Anam PALF is made from agricultural resources that were previously considered to be waste, serving as a 100% plant-based and low-impact alternative to cotton, linen, and polyester.
